

A person is shown from the side, wearing a white VR headset. The lens of the headset reflects a vibrant, futuristic cityscape with tall, glowing buildings and a lush, green landscape. The background is a dark, teal-colored space with faint, glowing patterns. The text "WELCOME TO THE ELP METaverse WORLD" is overlaid in a bold, yellow, sans-serif font on the left side of the image.

WORLD**

ELPMETAVERSE

What is Metaverse

A metaverse is a shared, online 3D space where users can interact with each other and with computer-generated objects and avatars. It is a virtual world that uses the Internet as its underlying network. Metaverses are used for various purposes, including social networking, online gaming, education, and training. They can be used to create virtual worlds that mirror the real world, or they can be used to create entirely new and imaginary worlds.

welcome to the

metaverse

HISTORY OF METAVERSE

Metaverse may have become the buzzword only recently, but it is well-known. Tim Berners-Lee invented the World Wide Web (www) in 1989. Then in 1992, sci-fi writer Neal Stephenson coined the term 'metaverse' to describe a 3D virtual space. Fast forward to 2022, the metaverse is a digital world created using different technologies like Virtual Reality (VR), Augmented Reality (AR), and cryptocurrency, and the Internet. However, a lot happened in these 30 years, from Philip Rosedale's 'Second Life' online virtual world in 2003 to Mark Zuckerberg's 2021 announcement of Meta's (formerly Facebook) metaverse plan.

HOW TO INVEST IN THE LAYERS OF THE METaverse

HOW IT WORKS ?

- Metaverse is a network of simulated digital environments with its main focus on social connection. It uses persistent virtual worlds, block chain and augmented reality to create spaces for interaction online. This is facilitated by mobile internet as well as augmented and virtual reality headsets.
- In the Metaverse, users can have an immersive experience on the internet by generating a three-dimensional image that surrounds them.
- This experience is impossible without using virtual reality, a key component of the Metaverse, where users get to experience both digital and real-world in the same space.

TECHNOLOGIES USED ?

Blockchain

Virtual Reality

Augmented Reality

Artificial Intelligence

Internet Of Things

3D Reconstruction

Artificial intelligence (AI)

Artificial intelligence (AI) is the ability of a computer or a computer-controlled robot to perform tasks that are usually done by humans as they require human intelligence.

1. Avatars 2. Digital Humans 3. Language Processing
